Manage calendars

Use calendars in the Central Management Console (CMC) to define run dates for scheduled jobs. When you assign a calendar to a job, the Business Intelligence platform runs the job on the dates specified in the calendar. You can also control calendar access for individual users and groups.

Calendars are useful when you need recurring jobs to run on customized schedules or when you want to provide specific scheduling dates for particular employees or departments.

This section includes the following topics:

- Access calendars
- Add dates to a calendar
- Delete a calendar
- Schedule a report

Access calendars

Create and access a calendar in the CMC to define schedules and customize run dates.

To create a calendar:

1. Log in to the CMC.
2. Go to Calendars.
3. Select Manage > New > New Calendar.
4. Enter a name for the calendar in the Calendar Name field.
5. Enter a description of the calendar's purpose in the Description field.
6. Select OK.

Result: The new calendar is added to the system.

Add dates to a calendar

Calendars support specific and recurring run dates. Use specific dates for selected dates in a yearly, quarterly, or monthly view. Use recurring dates for schedules based on a day of the week or a day of the month.

Date type	Description
Default dates	Display monthly, quarterly, and yearly formats for current run dates.
Specific dates	Specify selected dates using the yearly, quarterly, or monthly calendar view.
Recurring dates	Specify recurring run dates by day of the week or day of the month.

Add a run date

Add specific run dates using the yearly, quarterly, or monthly calendar view.

1. Log in to the CMC, and select the Dates tab.
2. From the Actions menu, select Dates.
3. Select a calendar format:
 - For specific dates, select Yearly, Quarterly, or Monthly.
 - For recurring dates, select By day of month or By day of week.
4. Select the days that you want to include as run dates.

Result: The selected run dates are added to the calendar.

Add a recurring date

Add recurring run dates based on a day of the week or a day of the month.

1. Log in to the CMC, and select the Dates tab.
2. From the Actions menu, select Dates.
3. Choose the recurring schedule that you want to create:
 - To add an entire week, select By day of week, and then select the row header.
 - To add run days for every week in a month, select the day name.
 - To add run days for a specific day of the week in a month, select By day of month.

Result: The recurring date is added to the calendar.

Delete a calendar

When you delete a calendar, the system runs scheduled objects associated with the calendar one final time. After the calendar is deleted, the system cannot schedule those objects again unless you update their scheduling information.

To keep the objects running, assign a different calendar or recurrence pattern before deleting the calendar.

1. Select the calendar that you want to delete.
2. Select Manage > Delete.
3. When the confirmation message appears, select OK.

Result: The calendar is deleted.

Schedule a report

Use a calendar to schedule a report to run on specific dates. For example, you can schedule a report to run on the 12th of every month.

1. Create a new calendar and enter a name.
2. Select By day of month, and then add the days of the month on which the report should run.
3. Update the calendar.

Result: The calendar is updated with the new run dates.
